Claims 1-12 and 17-19 are rejected under 35 USC 102 as anticipated by Brice or Nakano. Brice, figs. 3 and 4 teaches a SAW device using aluminum electrodes #2, #4, #5 covered with a metal oxide layer #11 (aluminum oxide). Nakano (fig. 9) teaches a SAW device with an aluminum electrode covered by a metal oxide layer (e.g. chromium oxide). Structurally this is what is defined by applicant's claims. The phraseology "that has a inhibit the migration" are merely statements of desired function that do not add structure and have thus not been given patentable weight. Applicants argument that the claims define a concept is not persuasive a concept is not a courts have found that claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. In re Danly 263 F. 2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). Applicant's claims cover what a device is not what s device does. "Hewlett-Packard CO. v, Baush & Lomb Inc., 909F .2d 1464, 1469, 15 USPQ 2d 1525, 1528, (Fed. Cir. 1990). (emphasis in original).

Claims 23-39 are rejected under 35 USC 102 as anticipated by Hori or Nakashima. Hori (figs. 1, 3, 4, 8 and 9) teaches a SAW device with an electrode layer #3, 34 of a first metal (Aluminum) and a layer of a second material covering the first layer (e.g. N. Cr) (see col. 7, ln 1-52). Nakashima fig. 2A teaches a similar structure. The citation of these new references is due to the amendment of claim 23.

Cited of interest is Misawa method claims does not negate the restriction requirement.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
